

Dreamweaver CS5

CSS Dialog Box Fields Explanations

Type Fields:

Font-Family: Specifies the font used.

Note: Three are listed; The OS determines the one used.

Font Size: Specifies the size of the font used.

Font-weight: Specifies the level of bold.

Font-style: Turns Italics on or off.

Font-variant: Turns small caps on or off.

Line-height: Determines the amount of spacing between the lines of text.

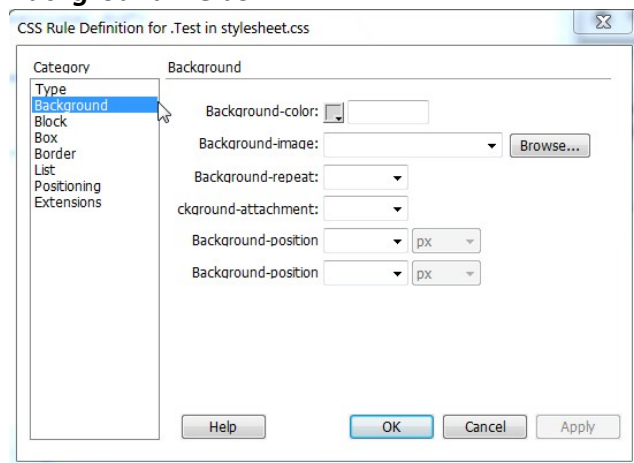

Text-transform: Determines the case type of the font (i.e. Upper case).

Ext-decoration: Adds additional styling for

fonts.

Color: Specifies the color of the font.

Background Fields:

Background-color: Determines the color of the background.

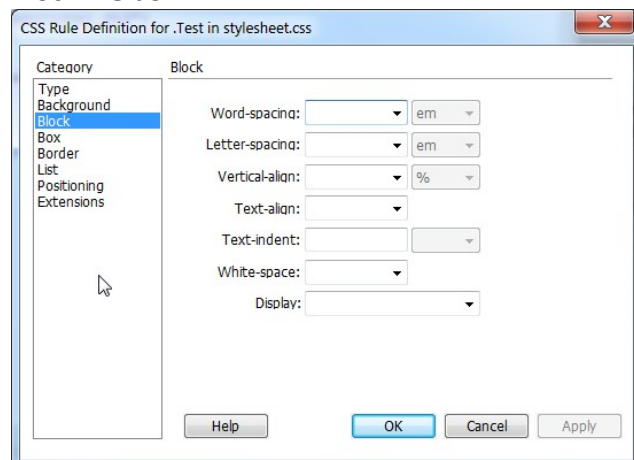

Background-images: Inserts an image into the background of the area.

Background-repeats: Repeats an image across the x or y axis.

Background-attachment: Determines if the image moves along with scrolling or stays fixed in a position.

Background-position: X and Y coordinate of the background image.

Block Fields:

Word-spacing: Determines the spacing between words.

Letter-spacing: Determines the spacing between letters.

Vertical-align: Determines the vertical alignment of the item (i.e. top, middle, etc).

Text-align: Determines the alignment of text (i.e. left, center, etc).

Text-indent: Specifies the amount to which text is indented.

Box Fields:

The screenshot shows a dialog box titled "CSS Rule Definition for .Test in stylesheet.css". On the left, a "Category" list includes Type, Background, Block, Box (selected), Border, List, Positioning, and Extensions. The main area is for the "Box" category and contains fields for Width, Height, Float, Clear, Padding, and Margin. Each of these has a dropdown menu and a unit selector (px). There are checkboxes for "Same for all" for both the Padding and Margin groups. At the bottom are buttons for Help, OK, Cancel, and Apply.

Width: Specifies the width of the element.

Height: Specifies the height of the element.

Float: Specifies the position in relation of the element to other elements.

Clear: Specifies if additional elements are allowed around the element.

Padding: Specifies the amount of spacing inside the element.

Margin: Specifies the amount of spacing outside of the element.

Border Fields:

The screenshot shows a dialog box titled "CSS Rule Definition for .Test in stylesheet.css". On the left, the "Category" list has "Border" selected. The main area is for the "Border" category and contains fields for Style, Width, and Color. Each has a dropdown menu and a unit selector (px). There are checkboxes for "Same for all" for each of these three groups. At the bottom are buttons for Help, OK, Cancel, and Apply.

Styling: Specifies the styling of the border (i.e. Dotted, Dashed).

Width: Specifies the width of the border.

Color: Specifies the color of the border.

List Fields:

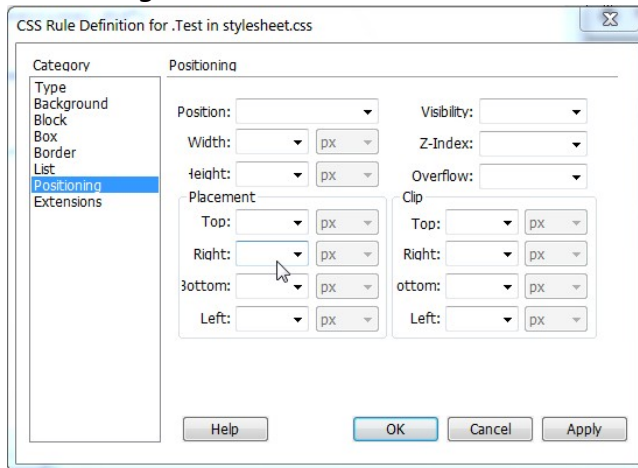

The screenshot shows a dialog box titled "CSS Rule Definition for .Test in stylesheet.css". On the left, the "Category" list has "List" selected. The main area is for the "List" category and contains fields for List-style-type, List-style-image, and List-style-Position. List-style-image has a "Browse..." button next to it. At the bottom are buttons for Help, OK, Cancel, and Apply.

List-style-type: Specifies the shape of the list bullet (i.e. circle, square).

List-style-image: Specifies an image to be used in place of the bullets of the list.

List-style-Position: Specifies if the bullets should appear in line with text or indented.

Positioning Fields:

Position: Specifies the position type of the element (i.e. absolute, relative).

Visibility: Specifies if the item is visible or not.

Width: Specifies the width of the element.

Height: Specifies the height of the element.

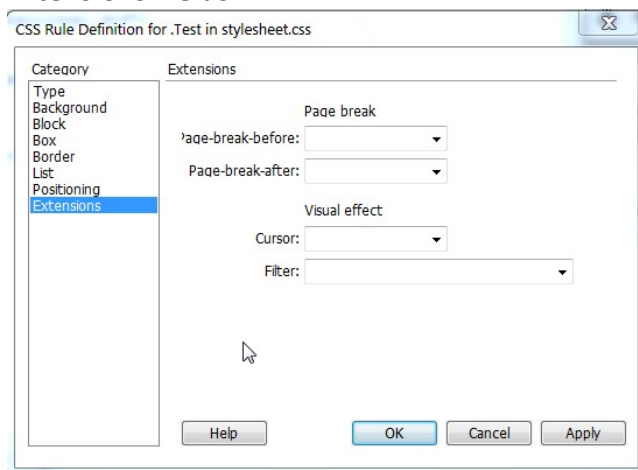

Z-Index: Specifies the position of an item on the z-axis.

Overflow: Determines what happens to items that exceed the content area.

Placement: Specifies the placement of the item on the page.

Clip: Specifies what happens to an image larger than the content area.

Extensions Fields:

Page-break-before: Specifies if page breaks occur before the item.

Page-break-after: Specifies if page breaks occur after the item.

Cursor: Modifies the look of the mouse pointer.

Filter: Specifies additional formatting and visual displays for images and other elements.
